

☁ On-device + your iCloud

🔒 Encrypted at rest

🔮 On-device AI

🚫 Never sold

## 📱 Where your data lives

Created and stored **on the user's device**. With sync on, it replicates **only to the user's own private Apple iCloud** (CloudKit private DB). Sound Safari runs **no server holding clinical data** and can't access a user's iCloud.

## 🔒 Encryption

At rest via iOS Data Protection — audio uses the strongest class (**Complete**) and is excluded from device backups. Encrypted in transit and at rest in iCloud via Apple CloudKit.

## 🗑 Data minimization (PHI)

Audio uses random UUID filenames; PDF metadata is name-free; homework links omit the child's name (HMAC-signed). Deletion is a **cryptographic erase** — keys destroyed, unrecoverable.

## 🔮 On-device AI

AI (e.g., SOAP-note drafting) runs on-device via Apple Foundation Models. **No clinical data, audio, or transcripts are sent to any AI service.**

## 🔍 Authentication

Clerk sign-in, including Sign in with Apple. Each user's data is scoped to their own account.

## 🚫 No ads, no trackers, no sale

No ad or behavioral-analytics SDKs, no data brokers. Optional analytics are de-identified and can be turned off. **We don't sell data — including de-identified data.**

### — Sub-processors — none receive clinical or student data

Provider	Purpose	Data it receives
● Apple iCloud (CloudKit)	Optional sync storage	The user's own data, held in the user's iCloud account
● Clerk	Authentication	Account email and name
● RevenueCat	Subscriptions	App Store purchase history, app-specific user ID
● Sentry	Crash diagnostics	Technical crash data only; names, identifiers, and screenshots stripped

## 🛡 Compliance posture — stated plainly

**HIPAA:** Sound Safari is a clinical practice tool, **not a HIPAA-covered platform**, and does **not offer a Business Associate Agreement (BAA)**. Because data resides on the user's device and in the user's own iCloud — not on Sound Safari servers on a covered entity's behalf — the covered entity is the clinician or their organization, not Sound Safari. Organizations requiring a signed BAA before student PHI is entered should consult their compliance officer.

**FERPA:** Where student data is an education record, FERPA compliance is the educational institution's responsibility. We recommend student initials over full names.

**COPPA:** Sound Safari does not knowingly collect personal information from children; children do not create accounts.

## User controls

Full data export (CSV/PDF) and per-student or complete deletion in-app. Off-device contributions (e.g., anonymous word suggestions) are opt-in and off by default.
